PROJECTS

Custom Crafts (React.js, JavaScript, HTML5, CSS3, Python3, Flask, SQLAlchemy, Alembic, SQL, GraphQL)   **Live Site | Github**
A fullstack single-page e-commerce application where users can view custom-made spaceships, purchase them, and write reviews of their favorite ships.
- Implemented the Blender App to create 3-D models of customized spacecrafts for our e-commerce shop where you manipulated the spacecrafts in 3D and on 2D axes while also adding color to them which enhanced the UI and rendered a through-line design.
- Contributed to the Splash page, Shopping Cart, Order Summary and Profile pages in a group dynamic utilizing the git workflow and React.js to write the code for the Shopping Cart table, implement the logic of increasing and decreasing the quantity of items - laying the groundwork for all frontend components.

Clack (Javascript, HTML5, CSS, Node.js, Express.js, Pug.js, SQL, Sequelize ORM and Socket.io)   **Live Site | Github**
A fullstack multiple-page live chat with emoji-switch where users can live-chat in real-time, add channels, and edit their profiles.
- Managed and led the team on the frontend UX and UI utilizing CSS and Pug.js to design the Splash and the live chat-room pages, where styling decisions were made emulating web leaders in CSS grid for aesthetic visual UI appeal, resulting in the carousel slide-show and modern parallax scrolling effect.
- Implemented WebSockets with Socket.IO to enable real-time chat functionality, creating a highly dynamic user experience.
- Ensured that live-chat has auto-scrolling capability with Javascript events--the built-in "scroll into view" Web API method and CSS overflow property.
- Enabled audio-sound when text messages are sent and broadcasting features by utilizing the html audio element tag and finding appropriate audio sounds for 'clicks' when sending messages.
